Open to Work

Front-End / Full-Stack Software Engineer

Dear Potential Employer,

I'd like to introduce you to what I bring to an engineering team: a combination of thoughtful software development, an eye for good design, and a genuine interest in building products that people enjoy using.

With experience in **React, Next.js, TypeScript, and Tailwind CSS**, I can help turn complex requirements into modern, responsive, and maintainable web applications. I place great value on reusable components, clean architecture, and writing code that is easy to understand, extend, and maintain. I also have experience working with **jQuery and Bootstrap**, giving me exposure to different approaches to front-end development.

My experience also extends beyond the front end, with hands-on work in **Node.js, C#/.NET, Firebase, and SQL**. This allows me to understand the bigger picture of application development and how decisions made on the front end affect APIs, data structures, and the overall product.

Key Focus This Year - 2026
I've also dedicated much of this year to strengthening my SQL skills, so you can trust me to hold my own when it comes to working with databases!

I also bring a design perspective to software development. My understanding of visual hierarchy, spacing, typography, consistency, and usability allows me to approach interfaces with more than just implementation in mind. I pay attention to the details that make applications feel polished, intuitive, and cohesive. I don't just want an interface to work; I want it to make sense to the people using it.

Beyond the technical skills, I value collaboration, continuous learning, and being part of a team that takes pride in its work. I enjoy working through problems, sharing ideas, learning from others, and contributing to solutions that stand the test of time.

If your team values engineers who think beyond the task at hand, care about the user experience, and take ownership of the quality of their work, I'd welcome the opportunity to contribute. I look forward to connecting.
